

Batch Scanning for High Volume AP Processing

For high volume Accounts Payable processing, Spitfire offers a Batch Scanning solution. This solution allows AP invoices to be scanned into the system in batches rather than individually. Furthermore, since the scanned invoices can then be viewed on screen during AP Voucher entry, the entry process and routing of specific vendor invoices for project manager approvals become one integrated process.

Doc Control button on the MBS-Solomon forms is a direct link to attached image file that can be routed to project manager for approval.

The batch invoice viewer allows AP Clerks to rapidly click through pre-scanned invoices. Data entry is easier and each invoice is safely stored in your Microsoft SQL database.

Line	Description	QTY	UNIT	PRICE	AMOUNT
07	4" PVC RTR FERRULES 1/2"	8	mb	15.242	121.93
